Abstract

Lab reports sometimes include an optional Abstract section. If your report does not require an Abstract, you may delete this section.

I. Introduction

Welcome to the Texpile Generic Lab Report Template. This template is designed to meet common academic lab-report standards, including properly formatted title pages, centered justification, and an optional abstract section. You can select your preferred reference style in the Settings menu.

This lab-report style guide primarily follows a numbered-section format. All images, tables, and equations must be labeled.

II. Tables

Table 1: This is the table caption; use this section to briefly explain what the table shows

| Trial | Temperature $^{\circ}C$ | Reaction Rate $\frac{mL}{min}$ |
|---------|-------------------------|--------------------------------|
| Value 1 | Value 2 | Value 3 |
| Value 4 | Value 5 | Value 6 |

Notes: Your table may also include an optional notes section. You can toggle table headers and the notes section using the settings icon within the table.

You can then cite the table using the '@' symbol, for example: Table 1.

III. Images

Images are also an important component of most lab reports.

You can also reference images in your text, such as Figure 1.

IV. Equations

Lab reports typically follow strict guidelines, and any long equations must be cited. You can cite a block equation by toggling the Numbered option in the settings icon next to the equation.

$$\lim_{x \rightarrow 3} 3x \tag{1}$$

You can then reference it in your text, such as Equation 1.

Figure 1: Example Image

V. Citations

Citations are very important. You can add citations like this: [1]
